PROJECTS

AI Integrated Electric Saver System | GitHub

- Developed an IoT-based smart electricity-saving and monitoring system using ESP32.
- Integrated PIR, LDR, and DHT11 sensors to monitor human presence, light intensity, and temperature.
- Designed the system to automatically control lights and fans based on real-time room conditions, reducing unnecessary electricity consumption.
- Applied temperature-based automation for fan control and ambient light detection for automatic lighting control.

Tech Stack: ESP32, PIR Sensor, LDR, DHT11, Relay Module, Arduino IDE, Proteus

Password Generator | GitHub

- Built a tool to generate randomized, secure passwords
- for improved account security.

Tech Stack: Python

Attempt Locker | GitHub

- Developed a system to restrict further login access after a set number of repeated failed attempts.

Tech Stack: Python

Strong Password Maker | GitHub

- Created a tool to evaluate password strength and generate stronger password combinations.

Tech Stack: Python
